Braille Scanner

Braille scanner allows you to take a photo of a piece of paper with Braille on it, and the braille is converted to text within seconds.

Zitat

Braille Scanner was created to help convert from Braille to text. It uses a combination of machine learning and vision to do this. The current machine learning model uses united english braille, grade 1 and I'm planning on adding more in the coming app updates.

Features:

- Auto document scan

- Braille conversion using Unified English Braille (UEB), grade 1

- Braille/text to speech

- Export converted Braille as text

- Export Braille characters

- 17 different app icons

When you're scanning braille, if you find any incorrectly converted braille feel free to report your findings and I'll use that to build a more accurate machine learning model.

If you have any questions, feedback or feature requests I'd love to hear from you. I'm an indie developer working on this app and all feedback is welcome.
